

Hello, may I help you?

Hello, yes. I need to install an indoor light.

Ok, so you have an idea of what you are going to do?

Yes the purpose of this lighting is to light my child's bedroom.

Okey, so I need tape of meter, googles, bubble level, electric drill with a metal drill, cutting pliers, wire stripper and water pump plier, a screwdriver, and little hammer.

But it's missing tools. You need a wire, light switch, multimeter and breaker.

Good can you help me?

Yes you look for a band?

My friend recommend me Makita.

Ho that a great make, comme here *\*dplacement\** There is a wire. what length of wire do you need?

I think, I need a 15 meter.

Okey, you need wire: red, blue, yellow and green. The light switch, timer or manual?

It's manual.

But it's most fragile.

Perhaps, but I need this.

Great, for the multimeter, maybe it would be better to choose a one with a midrange, for your personal used.

Right, but what's the price?

It's at 70 dollars but you have other at 50 however it's less efficient.

I rest on midrange.

Alright, the breaker it's a 30mA, it's really good for you.

Okey, that's great!

I let you go and settle all your materials, if you don't need my help again.

Thanks you for your help, I don't need it for the moment, good bye.

Good bye, have a nice DIY.
